Professional Summary

AI & Data Science undergraduate with hands-on experience in Python, SQL, Power BI, and Excel. Skilled in exploratory data analysis, data cleaning, SQL querying, dashboard development, and data visualization through end-to-end analytics projects.

Technical Skills

- **Languages & Databases:** Python, SQL (MySQL, DuckDB), phpMyAdmin
- **Libraries & Tools:** Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Git, GitHub
- **Data Modeling & BI:** Power BI, Star Schema Design, Relational Data Modeling, DAX
- **Analytics Frameworks:** Time-Series Analysis, Customer Segmentation, Exploratory Data Analysis, Predictive Analytics

Projects

Instacart Customer Analytics Dashboard | Personal Project | Jul 2026

- **Built** a DuckDB-powered analytics pipeline using **Python** to process **3.4M+ customer orders** and **206K+ users**, enabling scalable customer behavior analysis and efficient SQL querying on large datasets.
- **Segmented** customers into marketing tiers by developing a composite loyalty score with **SQL window functions**, helping identify **high-value customers** for targeted retention and subscription opportunities.
- **Developed** an interactive **Power BI** dashboard using a **star schema** and cohort retention analysis, enabling stakeholders to monitor customer drop-off trends, reorder behavior, and key retail performance metrics.

Food Nutrition & Health Risk Analytics System | Personal Project | Jun 2026

- **Developed** a nutrition analytics system to evaluate **1,028 food items** using **Python, SQL, and Power BI**, enabling users to compare foods based on nutritional quality and health risk.
- **Designed** a dual-metric scoring framework combining **Nutrition Density** and **Health Risk Score**, helping identify healthier food alternatives through data-driven nutritional assessment.
- **Built** an interactive executive dashboard that visualizes nutritional trends, product risk categories, and dietary trade-offs, supporting informed food selection and nutrition-focused decision-making.

Indian Agricultural Price Volatility & Market Intelligence Platform | Personal Project | Feb 2026

- **Analyzed** multi-year agricultural pricing data using **Python and Pandas** to measure **7-day rolling price volatility** and regional price fluctuations, helping identify unstable commodity markets.
- **Developed** an interactive **Power BI** dashboard with advanced **DAX** calculations to monitor regional price trends, seasonal volatility, and commodity performance through dynamic visualizations.
- **Identified** regional pricing anomalies through statistical analysis, enabling stakeholders to compare market performance, detect pricing disparities, and support data-driven agricultural pricing decisions.

Awards & Certifications

- **National Hackathon:** Placed 9th out of 40 final teams, clearing a competitive 273-team national screening funnel.
- 2nd Prize: AI Sparkathon 2025 (Bearys Institute of Technology) — Secured podium finish out of competing teams.
- State-Level Innovator: Competed in AXIOM State Hackathon | Google Agentic AI Day | InUnity Community Innovation.
- Certifications: Supervised Machine Learning (DeepLearning.AI) | SQL for Data Science (IBM/Coursera).

Education

- B.E. in Artificial Intelligence & Data Science | Bearys Institute of Technology, Mangalore | **CGPA: 8.59** | 2023 – 2027
